**Subject:** RE: [EXTERNAL] Electrification Estimates for the Massachusetts and Rhode Island Lease Areas

Hi all,

We have been using 350 homes per MW for our calculation of homes powered. There is likely some variability in this estimate due to how efficient the turbines are, but that is the figure we currently use.

Thanks.

Hi Michelle,

We were able to direct focus on the impacts from South Fork specifically, so our need for an answer on this is no longer pressing. We would however find it interesting to know the answer to the question. If you and your team are able to look into this over the next few days, we'd appreciate it. We also plan to do a little research on the question in-house.

Thanks,

Pat

Hello Pat,

I am looping in our Projects and Coordination Branch Chief, Dave MacDuffee. Dave would have the most up to date estimates for MWs and equivalent number of homes for the Northeast projects.

Thanks,  
Michelle Morin

Hi Mary and Michelle,

As news of our South Fork permit filters up through the Agency, we've been asked a few questions about the impacts of *all* offshore wind in the Massachusetts and Rhode Island lease areas. Based on projects that have made themselves known to EPA Region 1, we're estimating about 8,000 MW of installed capacity in the Massachusetts and Rhode Island lease areas. Do you all have any estimates on how many homes 8,000 MW of offshore wind would electrify?

Any assistance on this question would be greatly appreciated.

Pat
